

In all waste treatment systems, millions of different bacteria are present. Only a few will degrade the waste, but all compete for the same food source or air source. Most will not degrade the waste in the system completely, causing fermentation and odours, drain blockages, ineffective waste treatment and clogging absorption areas.

DRAINSOLV is the SOLUTION for the problems in your waste treatment system. Regular usage, maintains the dominance of bacteria required for effective waste treatment and the elimination of smell and blockage problems for you.

Who We Are

ENVIROFRIENDLY are professional waste treatment consultants, consulting to the federal government, food processing companies, hotels, motels, tourist resorts, property management companies and many more...

ELIMINATE PROBLEMS AND SAVE MONEY
Phone our free DRAINSOLV HOTLINE for FREE PROFESSIONAL CONSULTANCY.

DRAINSOLV Is Simple to Use

No stirring, no soaking, no waiting. Ready to use immediately.
Just measure out 30mls into a bucket. Half fill the bucket with water and pour into sinks, toilets, showers and wash basins.

Commercial Applications

High volume kitchens, commercial kitchens, hotels, motels, restaurants, caravan parks

Call us on our FREE DRAINSOLV HOTLINE for a professional Maintenance Program tailored to your site.

DONT THROW THIS LEAFLET OUT - KEEP IT HANDY, SO THAT WE CAN HELP YOU IN THE FUTURE.

What's the cost?

Approximately \$3 per week for a household of four people.

Guarantee

"I personally guarantee Drainsolv will eliminate blockages and bad smells from your drains... if it doesn't, I'll refund your investment in full..."

Manager, Envirofriendly

ADDED BONUS...

Most household septic and holding tanks need to be pumped out every 5-7 years. Using Drainsolv regularly will reduce pump outs by at least half.

Special Offer

If you call now and order six months supply of Drainsolv... you'll receive the sixth month absolutely FREE...

You need to order within 7 days of receiving the leaflet. Call Envirofriendly now...

How to Order

Factory Direct: Drainsolv is available from us on our DRAINSOLV HOTLINE

FREECALL 1800 626 334

Monday to Friday 9am to 5pm.

ENVIROFRIENDLY PTY LTD

PO Box 264

IMPORTANT NOTICE...

FOR OWNERS OF SEPTIC SYSTEMS AND SEPTIC WASTE TREATMENT SYSTEMS

HERES HOW TO:

- * **SAVE MONEY IN EXPENSIVE REPAIR COSTS**
- * **STOP SMELLY DRAINS AND**
- * **STOP BLOCKAGES**

YOUR WASTE TREATMENT SYSTEM WILL CAUSE YOU FINANCIAL AND ENVIRONMENTAL PROBLEMS.

WARNING SIGNS

Odours:- Emitted from drains or vent pipes.
Blockages:- Slow running drains or blocked drains.

Modern household chemicals will kill the bacteria essential for the treatment and degradation of waste in Septic and Waste Water Treatment Plants.

Chemicals Harmful To Your System

AREA	ACTIVITY	PRODUCT BASE
KITCHEN	Floor Cleaners	Caustic, Chlorine, Detergents
	Oven Cleaners	Caustic Soda, Detergents, Ammonia, Detergents, Chlorine Disinfectants
	Surface Cleaners	Chlorine
LAUNDRY	Nappy Soakers	Chlorine
	Bleaches	Hydrocarbon Detergents
	Paints, Solvents, Washing	Ammonia, Chlorine
BATHROOM	Mould Removers	Detergents, Caustic Soda
	Surface Cleaners	Ammonia, Detergents, Chlorine, Disinfectants

Please Note:- Sanitary napkins should not be disposed of in a Septic System.

THE SOURCE OF THE PROBLEMS

- *undegraded wastes cause blockages in drains, tanks, and absorption areas
- *fermenting wastes cause odours.

DON'T POLLUTE YOUR ENVIRONMENT

Treatment systems without the correct bacterial activity are ineffective and pollute your environment, water-courses, land and underground water.

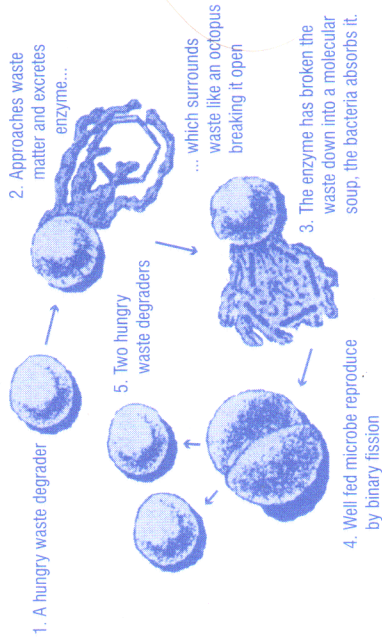

SAVE YOUR MONEY

All of these problems are expensive to rectify. Think of the inconvenience and cost of having smelly waste tankers in your backyard pumping out tanks needlessly and the cost of excavating and relandscaping around your home replacing pipes, tanks, and absorption areas. Not to mention the costs to your environment.

DRAINSOLV is the SOLUTION!!

HOW IT WORKS!!!

Microbes/Enzyme Growth Cycle

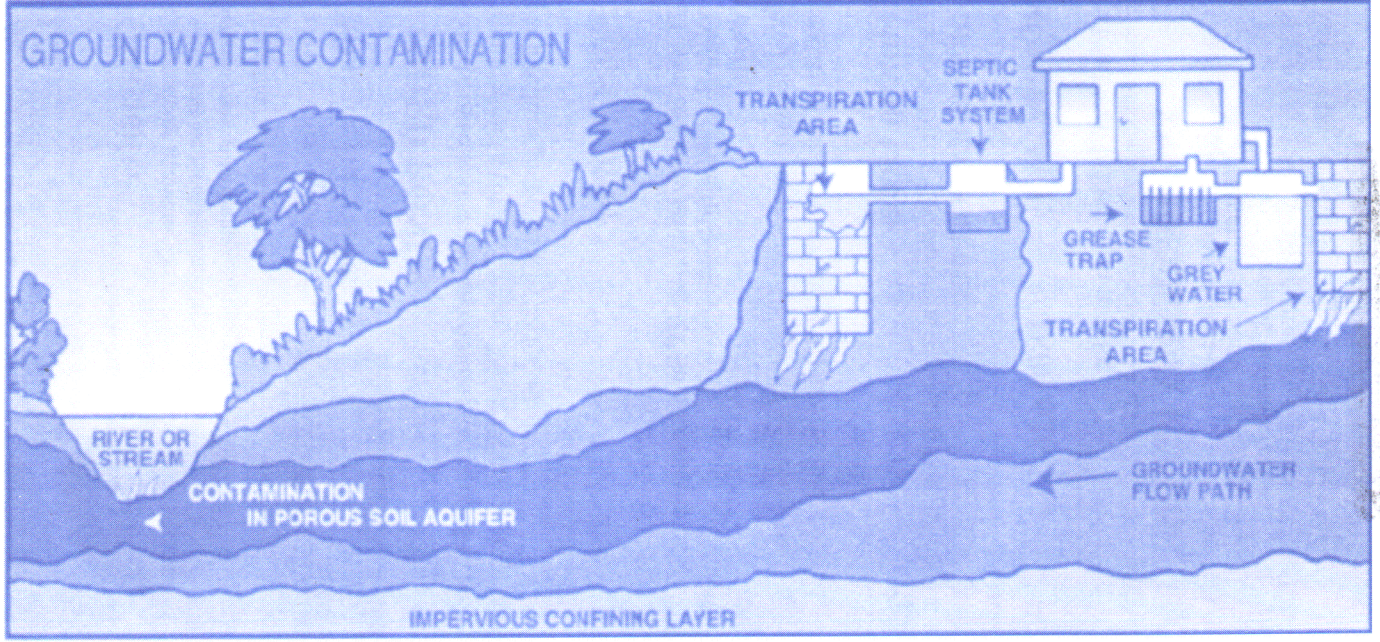

DRAINSOLV is the SOLUTION!!!

Aggressively Digests Wastes Like Fats, Vegetable Oil, Grease, Paper, And Toilet Wastes.

DRAINSOLV is formulated from naturally occurring non toxic strains of bacteria and has billions of bacteria in every bottle. In the drainlines and tanks of your treatment system each bacterium reproduces itself every 20 minutes, quickly creating the dominance of the bacteria required for the complete degradation of waste throughout the system.

When dosed to the toilet or drainline system, the bacteria embed themselves in the organic build up in the drains, reproduce and start the degradation process. The flow of water washes degraded particles laden with bacteria further into the system where degradation and reproduction continue until their food source (waste) is depleted.

The end result is carbon dioxide, water and a cleaner environment for your home.

HERES WHAT SOME OF OUR CUSTOMERS SAY...

Mr M Sivyer of Nerang...

"We built our home 26 years ago on a dry stony ridge. We have no town water and no sewerage. When we installed a massive soakage pit, we knew full well the problems in these types of areas. The complete system broke down 10 to 12 years ago, with a huge cost to fix it. Two years ago, problems started again. Since then we have used Envirofriendly' Drainsolv. Over that time, the problems have disappeared, drain lines are squeaky clean, and no smell and no blockages. It is obvious that Drainsolv works admirable in the rough-est conditions.

Mr K Devitt of Maleny...

"At our conference and holiday resort, we have our own septic waste water treatment system. Regularly, due to great increases in usage on the system, (during holidays and large conferences), we have had problems with pungent odours from drains and the treatment system. Since we have used Drainsolv, those problems have been eliminated from the treatment system. The outflow water is way under acceptable criteria (looks clean enough to drink).

All manufacturers of these types of systems should recommend the use of Drainsolv. All owners need to use it."

Mr J McConville of Yepoon...

"I had a problem with a smelly septic tank. Our prevailing winds are North East or South East. When we had North Easterly winds, the smell would come in the kitchen window. After an initial application of Drainsolv, we had continuing North Easterly winds, and we have had absolutely no smell entering the open window or noticeable smells anywhere in the yard. With my experience, I feel I can recommend the use of Envirofriendly products for septic tanks and grease traps.

**DON'T THROW THIS LEAFLET OUT-
KEEP IT HANDY SO THAT WE CAN HELP
YOU IN THE FUTURE.**

FOR OWNERS OF SEPTIC WASTE WATER TREATMENT SYSTEMS

Did you know that the regular services performed on your system are not for preventative maintenance for you? It is to ensure that the consumable items (such as chlorine) are supplied, and that the water effluent is within acceptable levels. This does nothing to contain your maintenance costs. Odour and blockages will occur in your system as set out in this leaflet. Undegraded wastes with foul the efficient working of equipment (such as pumps) and cause you premature repair and replacement costs.

REDUCE COSTS THROUGH PREVENTATIVE MAINTENACE

Using Drainsolv regularly will create the correct biological balance for efficient degradation of wastes that cause the problems.

Regular usage of Drainsolv will:

- * Eliminate pungent odours
- * Reduce holding tank pump outs
- * Eliminate blockages
- * Reduce expensive repair costs
- * Make your home environment more comfortable
